

THE 2011 WORLD MAP OF EXHIBITION VENUES

December 2011

SUMMARY OF FINDINGS

Introduction: scope and methodology

As a part of its strategy, UFI's objective is to provide reliable data on the exhibition market to its members and to all those interested in exhibitions. This data covers 3 elements: the exhibition venues, the exhibitions held in those venues and the companies who organize those events.

This report relates to the first element. The objective was to identify all venues¹, worldwide, with a minimum of 5,000 sqm of indoor exhibition space² (for a complete overview of UFI activities, please look at www.ufi.org).

The data collection was conducted through several channels:

- Regional directories, when available (Trade Show Executive for USA & Canada, BSG for Asia) and otherwise national associations (see list in note ³),
- Individual information from venues.

The results are considered reliable. They cannot however be considered as 100% accurate or complete, given the poor availability of reliable data in some countries and UFI cannot be held responsible for errors or any consequences arising from the use of this information.

Main results

1,197 venues (with a minimum of 5,000 sqm of indoor exhibition space) **were identified for the year 2011 and their total indoor exhibition space reaches 32.6 million sqm.**

Europe and North America, followed by Asia offer the highest venues capacities, with respectively 48%, 24% and 20% of the total indoor exhibition space (cf. table 1 for complete results and mapping of regions).

The size of venues also varies from one region to another (cf. table 2). 55 venues – 36 of them being in Europe and 12 in Asia – have an indoor exhibition space of 100,000 sqm and more (cf. table 3).

In terms of countries, 5 of them (USA, China, Germany, Italy and France) account for 59% of the total world indoor exhibition space (cf. table 4 for the capacity details of the 34 countries with a minimum of 100,000 sqm of indoor exhibition space).

¹ "Venue" definition (for the purpose of this survey): any public assembly premises with a minimum of 5,000 square meters (sqm) of indoor Exhibition Space and that hold various types of exhibitions, trade fairs or consumer/public shows on a regular basis. The premises may be purpose-built exhibition centre space or other premises including Exhibition Space (e.g. hotels, arenas, sport venues, and amusement fair grounds).

² "Exhibition Space" (for the purpose of this survey): the amount of gross exhibition space in the Venue regularly marketed and rented/licensed/used for exhibitions, trade fairs or consumer/public shows.

³ AEFI (Italy), AEO (UK), AFE (Spain), AFIDA (Central & South America), AMPROFEC (Mexico), AUMA & EVVC (Germany), BAFEO (Bulgaria), CAEC (China), CLC–Centrum voor Live Communication (The Netherlands), EFU (Ukraine), EXSA (Botswana, Kenya, Mozambique, Namibia, South Africa, Zimbabwe), FAIRLINK (Denmark, Finland, Norway, Sweden), FEBELUX (Belgium & Luxembourg), FSCEF (France), PCEI (Poland), RUEF (Russia), TFOA (Turkey), UBRAFE (Brazil).

The exhibition space has grown by an annual average of 2.3% since 2006.

The additional indoor exhibitions space between 2006 and 2011 reaches 3.4 million sqm. 54% of this additional space relates to the construction of new venues and 46% to extensions of existing venues.

All regions, except Africa where one large venue has closed, have significantly increased their capacity (cf. table 5). This is particularly true for Asia/Pacific (+38%) and the Middle East (+16%). One significant change is the shift of 2% of the global “market share” from both Europe and North America to Asia / Pacific (+4%).

15 countries have increased their total indoor capacity by at least 50,000 sqm between 2006 and 2011 (cf. table 6). China accounts for 46% of the global increase and 69% of the Chinese increase relates to new venues.

Conclusion

The exhibition space has still expanded, proving the strength of the exhibition industry. However, the overall 2006-2011 rhythm of development (2.3% per year on average) is lower than it had been anticipated in 2007 (3.1% - see 1st UFI World Map of Venues).

These trends also result from different situations. In addition to the need of market adjustment in some countries with “under capacity”, the increase of exhibition space often result from fierce competition, both locally and internationally, with a “development race” often justified by operators with:

- The need to enlarge facilities to keep the growing shows from moving;
- The growing awareness by local authorities of the benefits of the industry, both in terms of direct and indirect economic impact; and
- The coexistence of various economic models and financial expectations.
